The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the X-ray powder diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

NEW MINERAL PROPOSALS APPROVED IN JUNE 2014**IMA No. 2014-014**

Zincomenite

Northern fumarole field, First scoria cone of the Northern Breakthrough of the Great Tolbachik Fissure Eruption, Tolbachik volcano, Kamchatka Peninsula, Far-Eastern Region, Russia ($55^{\circ}41'N$, $160^{\circ}14'E$, 1200 m asl)

Igor V. Pekov*, Vasiliy O. Yapaskurt, Sergey N. Britvin, Nikita V. Chukanov and Evgeny G. Sidorov

*E-mail: igorpekov@mail.ru

Known synthetic analogue

Orthorhombic: *Pbca*

$a = 7.199(1)$, $b = 6.238(1)$, $c = 12.006(2)$ Å
 $4.612(26)$, $3.601(77)$, $3.119(48)$, $3.048(38)$,

NOMENCLATURE PROPOSAL APPROVED IN JUNE 2014

Tobermorite group

A new nomenclature scheme has been approved for minerals in the tobermorite group. Several minerals in the group were also redefined. Plombierite has been redefined as: $[Ca_4Si_6O_{16}(OH)_2 \cdot 2H_2O] \cdot (Ca \cdot 5H_2O)$; tobermorite has been redefined as two minerals: tobermorite $[Ca_4Si_6O_{17} \cdot 2H_2O] \cdot (Ca \cdot 3H_2O)$ and kenotobermorite $[Ca_4Si_6O_{15}(OH)_2 \cdot 2H_2O] \cdot 3H_2O$; clinotobermorite has been redefined as $[Ca_4Si_6O_{17} \cdot 2H_2O] \cdot (Ca \cdot 3H_2O)$; and riversideite has been redefined as a questionable species.

NOMENCLATURE PROPOSALS APPROVED IN JULY 2014

IMA 14-B: Thorogummite

Proposal 14-B is accepted, and “thorogummite” is discredited. This name has been used to describe heterogeneous mixtures of secondary, non-crystalline minerals, produced by the alteration, hydration, or metamictization of thorite.

IMA 14-E: Jamborite

Proposal 14-E is accepted, and jamborite is no longer a “questionable species” but a valid species. Jamborite lies outside the hydrotalcite supergroup as defined by Mills *et al.* (2012); its ideal formula is $Ni_{1-x}^{2+}Co_{x}^{3+}(OH)_{2-x}(SO_4)_x \cdot nH_2O$ [$x \leqslant \frac{1}{3}$; $n \leqslant (1 - x)$].
